Education

Sultan Ageng Tirtayasa University

Aug. 2021 – Oct. 2025

Bachelor of Computer Science (Informatics Engineering); GPA: 3.90/4.00

Cilegon, Banten

- **Relevant Coursework:** Data Structures and Algorithms (C), Prob & Stat in CS (Python), Intro to CS II (C++), Linear Algebra w/Computational Applications (Python)

Experience

Unit Penunjang Akademik Teknologi Informasi dan Komunikasi

May 2024 – Aug. 2024

Fullstack Engineer

Serang, Banten

- Architected the database and RESTful API for an alumni portal using Laravel and JWT authentication, optimizing endpoints to improve API response times by 25% and reduce server load by 30%.
- Built responsive admin, alumni, and student dashboards in React, integrating RBAC-protected endpoints to securely manage permissions across user tiers and streamline administration workflows.
- Developed backend validation logic and database migrations with foreign key constraints, writing automated PHPUnit feature tests to ensure 95% API endpoint reliability during deployment.

Konco Hiling Travel Platform

Jan. 2025 – Apr. 2025

Fullstack Engineer

Remote

- Developed RESTful API endpoints for the ticket booking and vehicle rental engines using Express.js and PostgreSQL, reducing database query latency by 20% through optimized indexing and relational constraints.
- Built the customer-facing booking interface and CMS admin dashboard using Next.js and Tailwind CSS, improving data retrieval and rendering efficiency for travel listings by 30%.
- Designed complex relational database schemas for users, bookings, and listings, reducing API error rates by 15% across the booking flow.

Projects

Inventory Management System | ExpressJS, React, PostgreSQL, SQL

- Built a full-stack inventory platform with a React dashboard and ACID-compliant PostgreSQL transactions for real-time stock tracking, cutting concurrency errors by 25% during high-volume order processing.
- Developed RBAC-protected React views and indexed reporting APIs, accelerating audit report generation by 35% while reducing unauthorized access to 0%.

WastelessEats | Google Maps API, Kotlin, PostgreSQL, Firebase, TensorFlow

- Built a surplus food marketplace Android app in Kotlin with a scalable backend architecture, accelerating local item search and filtering by 30%.
- Implemented token-based authentication and optimized real-time transaction pipelines for order claims, reducing unauthorized requests to 0% and sync errors by 20% under user spikes.

HappyMonday | Next.js, Prisma, Supabase, PostgreSQL, TypeScript

- Built an AI-powered job discovery platform end-to-end with Next.js App Router and Prisma, optimizing PostgreSQL schemas on Supabase to accelerate profile retrieval by 30%.
- Built an AI CV-parsing pipeline and Jobs API integration with server-side filter validation, reducing matching latency by 25% with 0% data sync errors.

Technical Skills

Languages: JavaScript, TypeScript, PHP, SQL, Kotlin, Python, C#

Frontend: React.js, Next.js, Redux, Tailwind CSS, HTML5, CSS3, jQuery, Bootstrap

Backend: Node.js, Express.js, Laravel, Flask, REST APIs, Android SDK

Data & AI: PostgreSQL, TensorFlow, PyTorch, Machine Learning, Neural Networks, Artificial Intelligence

Concepts: Database Normalization, Agile Methodology, Cloud Computing, Compiler, Operating System, Virtual Memory, Cache Memory, Encryption, Decryption
